HARWI 130

The Harwi 130 is an **icon** among circular saws.

The Harwi 130 is known worldwide for its **high quality** and **longevity**. A **rock solid design** with a perfect finish ensures that every professional is well served. Harwi has divided the 130 models into three versions: **BASIC, PREMIUM & PRO**. By choosing three fixed models, we are able to provide and advise every customer with the best possible **sawing solution**, fast delivery and good service.

Harwi 130

The Harwi 130 is a circular saw machine that excels in cutting and scalloping wooden beams with a maximum height of 135mm. Thanks to simple operation, the machine can also be adjusted for less heavy work, making the machine extremely suitable for processing planks, slats and/or plates. However, when sawing sheet material, it is recommended to work with an additional cross-cutting roller table that ensures smooth passage of the material to be sawn through the saw. The fine adjustment allows you to adjust the stop to the desired length down to the millimeter.

With the health of the operator in mind, the machine's extraction is designed to minimize the spread and exposure to particulate matter. At the top of the saw, the design of the safety hood ensures that there is maximum extraction at the point where the riving knife sends the sawdust. In addition, a vacuum is created through the connection to the material to be sawn, so that the fine dust cannot escape and go to the primary extraction above the saw blade is controlled. There is a collection container under the saw blade in the machine as a secondary extraction.

With this machine, it is very easy to switch from the narrow to the wide hood when miter sawing is required. Because this machine uses a system with magnets, the hoods can be changed in the blink of an eye.

For safety, a plastic push stick and a push wood holder are included so that material does not have to be fed by hand, and they therefore remain at a safe distance from the saw.

Depending on your needs, this saw is available in a **BASIC – PREMIUM – PRO** variant with the choice between a cutting width of 625 mm or 1250 mm.

The Harwi 130 is a simple yet strong and robust circular saw machine with a long lifespan that emphasizes healthy and flexible working for different purposes, a must for any carpentry factory or wood workshop.

Specifications

Our Mission

Through combining experience and craftsmanship with service and development, we strive for an optimal working environment in which safety, ergonomics and health come first. The robust nature and the long service life of our machines characterize our passion for technology. Our core business is the delivery of standard sawing solutions in the wood industry.

Our company

The company was founded in Helmond in 1960 and has been operational there for 63 years. Since 2024 Harwi produces its sustainable sawing machines in Deurne. Our specialization and expertise in the wood industry in particular has been ensuring satisfied customers for years. Providing innovative sawing solutions within the Netherlands and abroad is the foundation of our organization. Within this foundation we prioritize user friendliness and quality.
